

Smart Metering Installation Code of Practice (SMICoP)

At PFP Energy we focus on making sure that our projects bring great benefits to customers and the Smart Meter program is no different. Smart Meters are the latest development in energy meter technology, able to automatically send energy usage information to your supplier so you don't have the hassle of sending in monthly reads. Residential Smart Meters come with a free In-Home Display (IHD) which will show usage and exactly how much your consumption is costing in pounds and pence.

The SMICoP provides minimum standards for suppliers to follow in relation to customer facing aspects of the installation process. We follow this guide to ensure that our customers are provided with the best experience when it comes to the installation and maintenance of their meter. For more information about the standards that we follow, click the link below.
